Nurettin Coban

Senior Software Engineer | Backend & Distributed Systems | EV  
Charging Platforms | AI Agent Tooling

Helsinki Metropolitan Area

Summary

Senior Software Engineer with 12+ years of experience building scalable backend systems and developer platforms. Experienced across the full stack, with a strong focus on distributed systems, platform architecture, and infrastructure-heavy software. Currently working on EV charging infrastructure platforms and protocols including OCPP, OCPI, OICP, and ISO 15118 Plug & Charge integrations. Experienced in building and operating production systems that integrate hardware, payment infrastructure, and large-scale backend services. Led a cross-functional team as Tech Lead and Interim Engineering Team Lead, guiding architectural decisions, mentoring engineers, and leading small teams delivering critical platform features. Outside of work, I explore AI-driven software development workflows and build tools that help engineers move faster. My open-source projects focus on transforming product requirements into AI-assisted development workflows and improving developer productivity with LLM-powered tooling. Interested in:

- AI-native software development
- Developer platforms & tooling
- Distributed systems
- Intelligent automation

Technical Expertise

- EV Charging & Energy
- OCPP
- OCPI
- OICP (Hubject)
- ISO 15118 Plug & Charge
- Backend & Platform
- Distributed systems
- Backend architecture
- API design
- Microservices
- Technologies
- PHP (Laravel)
- Node.js
- C# / .NET
- PostgreSQL
- Elasticsearch
- Infrastructure
- Docker
- Kubernetes
- Cloud-native systems
- AI & Developer Tooling
- AI-assisted development workflows
- LLM tooling
- Developer productivity tools

Experience

Virta Ltd

6 years 7 months

Senior Software Engineer

January 2026 - Present (10 months)

Helsinki, Uusimaa, Finland

Building and operating large-scale EV charging infrastructure platforms serving charging operators across Europe. Working across tariff systems, roaming integrations, and backend services that power thousands of charging stations.

### Tech Lead & Interim Engineering Team Lead

January 2024 - January 2026 (2 years 1 month)

Helsinki, Southern Finland, Finland

Led a cross-functional engineering team, combining hands-on technical leadership with people management responsibilities including 1:1s, hiring, and team development.

Drove the full integration of ISO 15118 Plug & Charge — enabling EV drivers to authenticate and pay by simply plugging in, eliminating the need for apps or RFID cards. Coordinated across firmware, backend, and third-party certificate authorities to deliver the end-to-end solution.

Led the integrated payment terminal project, bringing card-based payment capability directly to charging stations — a key requirement for public charging accessibility regulations.

Managed roaming protocol integrations (OCPI, OICP/Hubject) connecting Virta's network with external charging operators and eMobility service providers.

### Senior Software Engineer

January 2022 - January 2024 (2 years 1 month)

Helsinki, Southern Finland, Finland

Core contributor to Virta's charging platform, working across multiple critical domains including tariff management, roaming protocols (OCPI, OICP), and OCPP-based charger communication.

Built and maintained backend services handling real-time charging sessions, pricing logic, and operator-facing APIs. Gained deep expertise in EV charging industry standards and protocols.

### Software Engineer

April 2020 - January 2022 (1 year 10 months)

Helsinki, Southern Finland, Finland

Joined Virta's engineering team and ramped up across the platform's PHP/Laravel and Node.js services. Contributed to backend development across charging infrastructure, roaming, session management, and platform integrations.

### Devolon

### Software Engineer

December 2018 - April 2020 (1 year 5 months)

## Estonia

Relocated to Estonia to join Devolon, an IT services and consulting company, working on client projects primarily built with Laravel.

Lead project: Built the backend and web management interface for Naughty BRGR, a Finnish restaurant chain's ordering platform. The system supported in-store and takeaway ordering, payment processing, and a kitchen management interface. The product was eventually sunset as food delivery aggregators like Wolt took over the market.

Delivered additional Laravel-based web applications for various consulting clients.

## Safee Fleet Management

### Software Engineer

January 2017 - December 2018 (2 years)

Full-stack developer on Safee, a fleet tracking platform monitoring 10,000+ vehicles in real time.

Focused primarily on the frontend and UI/UX, building interactive map-based dashboards using Google Maps API and Leaflet integrated with PostgreSQL-backed geospatial services. Developed route visualization, vehicle tracking, and operational monitoring interfaces.

Built a lightweight React Native mobile companion app for the fleet platform. Also contributed to proof-of-concept projects using Angular and PHP (Yii 2 framework).

Technologies: JavaScript, JSF, PostgreSQL, SQLite, Google Maps API, Leaflet, React Native

## Metanet Group

### Software Engineer

June 2013 - November 2016 (3 years 6 months)

Gaziantep, Türkiye

Joined full-time after completing a high school internship, quickly progressing from junior responsibilities to independently architecting and delivering production applications across web, desktop, and enterprise domains.

Developed customer-facing kiosk applications, internal enterprise platforms, and field operations tools for solar energy teams. Worked across the full stack — from re-architecting desktop application deployment strategies to building web-based management systems serving 10–20 internal users.

Gained additional experience with SAP Business One configuration and solar performance monitoring systems.

Technologies: C#, ASP.NET, SQL Server, SQLite, PHP, Qt

---

## Education

Hasan Kalyoncu University

Bachelor's degree, Computer Engineering

Mehmet Rüstü Uzel Technical and Industrial Vocational High School

High School Diploma, Information Technologies / Database Programming
