

Nurettin Çoban

Senior Software Engineer — Backend & Distributed Systems

Helsinki, Finland · cobannurettin@gmail.com · linkedin.com/in/nurettincoban · github.com/nurettincoban · nurettincoban.github.io

SUMMARY

Senior software engineer with 12+ years of experience building scalable backend systems and developer platforms, specialising in distributed systems and infrastructure-heavy software. At Virta, builds and operates the EV charging platform that serves charging operators across Europe; as Tech Lead and Interim Engineering Team Lead, led the full delivery of ISO 15118 Plug & Charge and card payment terminals on chargers. Experienced in production systems that integrate hardware, payment infrastructure and large-scale backend services. Creator of ai-prd-workflow, an open-source workflow for AI coding agents supported by Anthropic's open source program.

SKILLS

Backend & architecture: distributed systems, microservices, system design, API design, real-time session processing, pricing and tariff logic

Languages & frameworks: PHP (Laravel), Node.js, TypeScript, JavaScript, C# / .NET, Python

Data & infrastructure: PostgreSQL, Elasticsearch, SQL Server, Docker, Kubernetes, cloud-native systems, CI/CD (GitHub Actions)

EV charging & payments: OCPP, OCPI, OICP (Hubject), ISO 15118 Plug & Charge, roaming, payment terminals

AI & developer tooling: AI-assisted development workflows, LLM tooling, Claude Code plugins, Agent Skills

Leadership: technical leadership, hiring, 1:1s, mentoring, cross-team coordination with firmware and third parties

EXPERIENCE

Virta — Helsinki, Finland

Apr 2020 – Present

EV charging platform used by charge point operators across Europe.

Senior Software Engineer

Jan 2026 – Present

- Build and operate backend services for a large-scale EV charging platform that powers thousands of charging stations, across tariff systems, roaming integrations and core platform services.

Tech Lead & Interim Engineering Team Lead

Jan 2024 – Jan 2026

- Led a cross-functional engineering team, combining hands-on technical leadership with people management: 1:1s, hiring and team development; guided architectural decisions and mentored engineers.
- Drove the end-to-end integration of ISO 15118 Plug & Charge, letting EV drivers authenticate and pay simply by plugging in, with no app or RFID card; coordinated firmware, backend and third-party certificate authorities.
- Led the integrated payment terminal project, bringing card payments directly to charging stations, a key requirement of public charging accessibility regulations.
- Owned roaming protocol integrations (OCPI, OICP/Hubject) connecting Virta's network with external charge point operators and eMobility service providers.

Senior Software Engineer

Jan 2022 – Jan 2024

- Core contributor across tariff management, roaming protocols (OCPI, OICP) and OCPP-based charger communication.
- Built and maintained backend services for real-time charging sessions, pricing logic and operator-facing APIs.

Software Engineer

Apr 2020 – Jan 2022

- Delivered backend features across charging infrastructure, roaming, session management and platform integrations in PHP/Laravel and Node.js services.

Devolon — Estonia

Dec 2018 – Apr 2020

Software Engineer

- Relocated to Estonia to join an IT services and consulting company building Laravel applications for clients.
- Lead developer of the ordering platform for Naughty BRGR, a Finnish restaurant chain: backend and web management interface for in-store and takeaway ordering, payment processing and kitchen management.
- Delivered further Laravel web applications for consulting clients.

Safee Fleet Management

Jan 2017 – Dec 2018

Software Engineer

- Full-stack developer on a fleet tracking platform monitoring 10,000+ vehicles in real time.
- Built interactive map dashboards with Google Maps API and Leaflet on PostgreSQL-backed geospatial services: route visualisation, vehicle tracking and operational monitoring.
- Built a React Native companion app for the platform; delivered proof-of-concept projects in Angular and PHP (Yii 2).

Metanet Group — Gaziantep, Türkiye

Jun 2013 – Nov 2016

Software Engineer

- Joined full-time after a high school internship and progressed to independently architecting and delivering production applications across web, desktop and enterprise domains.
- Built customer-facing kiosk applications, internal enterprise platforms and field operations tools for solar energy teams; re-architected the deployment of desktop applications.
- Configured SAP Business One and solar performance monitoring systems. Stack: C#, ASP.NET, SQL Server, SQLite, PHP, Qt.

OPEN SOURCE

ai-prd-workflow — creator and maintainer

github.com/nurettincoban/ai-prd-workflow

- RFC-driven development workflow for AI coding agents: takes an idea or an existing codebase to a verified PRD, prioritised features, project rules and sequenced RFCs, then implements and reviews one RFC at a time.
- Ships as a Claude Code plugin and as Agent Skills for Codex, GitHub Copilot, Cursor, Gemini CLI, OpenCode and Devin; ~300 GitHub stars; supported by Anthropic through its open source program.

diff2ai — creator

npmjs.com/package/diff2ai

- Local-first CLI, published on npm, that turns Git diffs into line-accurate AI code reviews with any AI CLI (Claude, Codex, Gemini, Ollama, ...): parallel reviewer personas with a judge that validates each finding against the diff.
- Posts inline comments on GitHub PRs and GitLab MRs; ships a GitHub Action, SARIF export for code scanning and severity gates for CI. TypeScript, Node.js.

EDUCATION

B.Sc. in Computer Engineering — Hasan Kalyoncu University

High School Diploma, Information Technologies / Database Programming — Mehmet Rüştü Uzel Technical and Industrial Vocational High School

LANGUAGES

English — professional working proficiency · Turkish — native · Finnish — limited working proficiency

OUTSIDE WORK

Produces melodic techno as NUO; debut single "Ad Astra" released on Soundtype (2023) and featured in Mixmag Turkey.
